¹ According to the VDSS Child and Family Services Manual 10.3.1.1 (2017), the term "affected by" may be evidenced by impaired growth, pre-term labor or subtle neurodevelopmental signs that are more difficult to define in the newborn and infancy stages. An alcohol or other drug affected infant is one in which there is detectable physical, developmental, cognitive or emotional delay or actual harm that is associated with parental substance use. The LDSS should collect and document how the child is affected by parental substance abuse.
